**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is vague and indefinite. On line 5, what constitutes “an unwind”? Is this suppose to be an unwinding area? On line 10, the term “advantageously” is unclear. “Advantageous” as compared to what other larger diameters?

Claim 2 is vague and indefinite. On line 4, the term “advantageously” is unclear. “Advantageous” as compared to what other larger diameters?

Claim 5 is vague and indefinite. On line 3, the term “preferably” is unclear because it is not known if there are supposed to be at least double amounts of paper web or not.

Claims 7 and 8 are vague and indefinite. On lines 7-9, the term “preferably” is unclear because it is not known if there are supposed to be at least double amounts of paper web or not.

Claim 9 is vague and indefinite. What constitutes “an unwind” of a finishing machine?

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herman (U.S. Patent No. 3,690,583) in view of Plevin (U.S. Patent No. 3,779,475).

Art Unit: 3654

With respect to Claims 1-12, Herman, Figure 1, teaches a method for a production line processing the web 21 wherein in the method the paper web is issuing from a paper maching is reeled in a reel-up around a reel spool to form a reel, the paper web is unwound in an unwind from the reel to a finishing machine 82; the paper is reeled up 65. Plevin, Figures 1-2, teaches reel spools having different dimensions. It would have been obvious to one of ordinary skill in the art to provide Herman with the ability for the reel to have different dimensions at the end of the line for the purpose of creating reels for different applications.

### *Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Erskine, Kawada et al, Delannoy, Hinz et al, and Gray et al are cited to show various other web handling devices of the prior art.
